

TECHNOLOGICAL FEATURES & INNOVATIONS USED BY TRANSPACK

Isosceles Storage System™

Transpack boot backpacks feature the patented *Isosceles Storage System™*. Two side pockets hold boots surrounding a large central compartment that accommodates a helmet and gear. Weight and bulk from boots are diverted to the sides and away from your back creating a natural suspension that is ergonomic and comfortable. Grommet air/water holes in side pockets provide ventilation and drainage for moisture and melting snow from boots.

Delta Strap System™

Single web strap triangularly connected to secure boots in side pocket.

Convertible

An expandable gusset allowing for expansion, in length or width, depending on model.

Variable Length Notch Locking System™

Allows for both a 1/4" hitch pin and TSA lock at the same time.

Ergonomic Top Front Handle

Ergonomically designed to comfortably hold the case while rolling.

Heated Boot Technology

Versatile plug options insure that your boots arrive at the mountain nice and warm.

Expansion Gusset

Opens to fit a full sized helmet or zips up flat when not in use.
